# ONETGY

# **Conergy Solar Force Piston Pump**

Conergy Solar Force Piston Pump draws water from a shallow well, spring, pond, river or tank. It can push water uphill and over long distances for home, village, irrigation or livestock uses. It can use power directly from a photovoltaic array or from storage batteries to fill a storage tank or to pressurize water.

#### Ultra-Efficient

Uses less power than any other pump in its range

#### Economical

Reduces power system cost by 25-75 % compared to centrifugal or AC pumps

# | Solar-Direct Application

| Starts pumping in low light conditions

# | Pressurizing Application

DC version is most efficient. AC version uses a low-surge permanent magnet motor that greatly reduces starting surge, inverter size, and wire size requirements (when compared to conventional AC pumps).

# Rugged and Reliable

Proven design with a 20-year life expectancy, simple to maintain with common tools (5-10 yr. maintenance interval)

### Good Tolerance for Dirt and Dry Run

# Mechanical Drive

| Allows engine or hand-lever backup

# Illustrated Instruction Manual

| Makes it easy for anyone to install and service, with no previous experience

# Construction

- Cast iron body
- Brass cylinder and valve seats
- Leather cup piston seals
- Neoprene valve seals
- Oil-bath crankcase
- Gear (timing) belt drive on PV models
- Standard V-belt on B models
- Pressure relief valve
- | Permanent Magnet DC Motor
- | Surge tank included (not in photo)

## Voltages Available

12, 24, 48, 90 V DC

Note: PV-Direct full working voltage is typically 20 % higher than nominal (example: 29 V for a 24 V system)

 $\mid$  115 V or 230 V AC, 50-60 Hz

# **Conergy Solar Force Piston Pump**

#### Suction Capacity

25 vertical feet (7.6 m) at sea level. Subtract 1 foot for every 1000 ft. elevation (1 m for every 1,000 m). Suction capacity may be further limited by intake pipe friction. Intake piping should be minimum 1" (3010, 3020 models) or minimum 1 1/4" (3040). For best reliability, place the pump as close to the water source as possible.

## System Requirements

- Solar-Direct Systems: Chart indicates power (w) required at the pump. The rated power of the PV array must exceed this number by 20 % or more. A pump controller (linear current booster) is required for the pump to start and run in varying light conditions. A solar tracker may be used to increase daily yield (40-55 % in summer).
- Pressurizing Systems: battery power system, pressure switch, and pressure tank of minimum 60 gallon (230 l) size (captive-air tank, available locally)

# Fittings

| Intake: 1 1/4" female pipe thread

Outlet: 1" female pipe thread

#### Dimensions

22 x 13 x 16" high (56 x 33 x 41 cm)

- With Surge Tank (not shown in photo), total height 26" (60 cm)
- Weight, max. 80 lbs (36 kg) Shipped in 2 or 3 boxes

#### Warranty

2 years against defects in materials and workmanship

#### Reading the Chart

Total Lift = vertical Distance from surface of the water source to the pipe outlet or top of storage tank

Model Designation:

V=voltage, B=battery model, PV=PV array-direct model
